PROFESSIONAL SUMMARY

Results-driven Computer Science graduate (CGPA 3.29/4.00) with practical experience in full-stack web development, database management, and application design. Proficient in the Front End, C#/.NET, SQL Server, and Python, with a strong foundation in software engineering principles and problem-solving. Delivered end-to-end solutions ranging from IoT embedded systems to enterprise-grade telemedicine platforms.

TECHNICAL SKILLS

Languages: C#, JavaScript, Python, SQL, HTML5, CSS3, C++

Frontend: React.js, .NET WinForms, Responsive Web Design

Databases: MySQL, SQL Server, SSMS

Tools: GitHub, Arduino IDE, Socket.io, VS Code, Visual Studio

Concepts: Client-Server Architecture, Embedded Systems

PROJECTS

DocConnect – Telemedicine & Appointment Management System

Final Year Project

MERN Stack

Architected a client-server application to deliver real-time video consultations and online appointment scheduling.

- Implemented role-based access control with JWT authentication, ensuring secure patient and doctor session management.
- Integrated Socket.io for real-time bidirectional communication, enabling instant chat and live status updates.
- Designed RESTful APIs in Express.js consumed by a React.js frontend with responsive UI for cross-device compatibility.

Tech Stack: MongoDB, Express.js, React.js, Node.js, Socket.io, JWT Authentication

Educational Accounting System

Completed

C# Desktop Application

Developed a full-featured accounting system managing student fee collection, staff payroll, and net profit/loss reporting.

- Designed a normalized relational database schema in SQL Server to ensure data integrity and optimized query performance.
- Built an intuitive .NET WinForms UI enabling non-technical administrative staff to manage all financial operations.
- Implemented automated report generation for monthly and annual financial summaries.

Tech Stack: C#, .NET WinForms, SQL Server, SSMS

IoT-Based Real-Time Color Detection System

Completed

Embedded Systems

Built a real-time color detection system using the TCS3200 sensor interfaced with Arduino UNO for automated color identification.

- Programmed microcontroller logic in Python to process sensor signals and classify RGB color values with high accuracy.
- Focused on sensor integration, microcontroller-peripheral communication, and embedded systems implementation.

Tech Stack: Arduino UNO, TCS3200 Sensor, Arduino IDE, Python

EDUCATION

MNS University of Agriculture – Multan, Pakistan <i>Bachelor of Science in Computer Science (BSCS) CGPA: 3.29 / 4.00</i>	2022 – 2026
Postgraduate College – Jampur, Pakistan <i>Intermediate Score: 792 / 1100</i>	2020 – 2022
Pakistan Hira High School – Jampur, Pakistan <i>Matriculation Score: 924 / 1100</i>	2018 – 2020

ADDITIONAL INFORMATION

- Languages: Urdu (Native / Full Professional Proficiency), English (Excellent / Professional Working Proficiency)
